

Assessed Exercise week 1_2

Task A : is exercise 9, from the Stacks and Queues Practical Exercises.

Create an application to store a Queue of people's names. The app should store up to 10 names, it should allow new names to be added to the Queue, names to be removed and displayed and the number of entries in the queue to be seen. The application can be a GUI or menu driven interface.

Task B : Create an application to manage a LinkedList of Library Books. You can use (adapt) the Book class we covered in week 1. The application should be capable of adding, removing, displaying and sorting the list by ISBN. Display can be via a single textbox if necessary.

This will be based on the practical exercises in Generic LinkedList practical exercises.
